Mouse CXC chemokine receptor binding to PSSF/SDF-1 pre-B cell stimulatory factor - is useful for screening of potential HIV infection and AIDS inhibitors.

Claim 1; Page 54-56; 76pp; Japanese.

The present sequence represents a murine CXC chemokine receptor which binds to the mouse CXC chemokine pre-B cell stimulatory factor PBSF/SDF-I. The nucleic acid is isolated from mouse pre-B cell line DW34. The receptor and cells expressing it can be used in the study and mapping of the mechanism of HIV infection and in screening of potential inhibitors of HIV infection and the development of AIDS

This sequence is the mouse CXCR4 protein. The invention relates to remedies inhibiting neovascularisation, remedies for solid cancer, remedies for diseases pathologically caused by neovascularisation and tissue repairing agents containing as the active ingredient a substance capable of potentiating CXCR4. Based on a finding that vascularisation is inhibited in a CXCR4 knockcut mouse, it becomes possible to prepare remedies inhibiting vascularisation which contain as the active ingredient a substance capable of potentiating CXCR4, remedies for solid cancer, remedies for diseases pathologically caused by neovascularisation ö 240 VILVWGYQKKIRSMTDKYRLHLSVADLLFVITLPFWAVDAMADWYFGKFLCKAVHIIYTV 120 QGDISQGDDRYICDRLYPDSLWMVVFQFQHIMVGLILPGIVILSCYCIIISKLSHSKGHQ 240 KRKALKITULILIAFFACHLPYYVGISIDSFILLGVIKQGCDFBSIVHKMISITBALAFF 300 VILVMGYQKKLRSMTDKYRLHLSVADLLFVITLPFWAVDAMADWYFGKFLCKAVHIIYTV 120 NLYSSVLILAFISLDRYLAIVHATNSQRPRKLLAEKAVYVGVWIPALLLTIPDFIFADVS 180 NLYSSVLILAFISLDRYLAIVHATNSQRPRKLLABKAVYVGVWIPALLLTIPDFIFADVS 180 KRKALKTTVILILAFFACWLPYYVGISIDSFILLGVIKQGCDFESIVHKWISITEALAFF 300 9 9 HCCLNPILYAFLGAKFKSSAQHALNSMSRGSSLKILSKGKRGGHSSVSTESESSSFHSS 359 HCCLNPILYAFLGAKFKSSAQHALNSMSRGSSLKILSKGKRGGHSSVSTESESSSFHSS 359 QGDISQGDDRYICDRLYPDSLWMVVFQFQHIMVGLILPGIVILSCYCIIISKLSHSKGHQ MEPISVSIYTSDNYSEEVGSGDYDSNKEPCFRDENVHFNRIFLPTIYFLTGIVGNGL Gaps CXCR4, mouse, neovascularisation, inhibitor, solid cancer, therapy, tissue repairing agent, vascularisation. . 0 inhibiting Indels CXCR4-potentiating agents and methods useful for neovascularization, and treating solid cancers. WO2003016475-A2

The invention discloses a composition comprising two or more isolated rate or human polymucleotides or a polymucleotide which represents a fragment, derivative or allelic variation of the mucleic acid sequence. Also claimed are a vector comprising the movel polymucleotide, a host cell comprising the vector, a method for identifying a mucleotide sequence which is differentially regulated in an animal subjected to pain and a ckit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polymucleotide sequence that is differentially expressed in meuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polymucleotide sequence which is differentially compound for identifying a compound that regulates the activity of one or more of the polymucleotides, a method for producing a pharmaceutical composition, a compound that regulates the activity of one or more of the polymucleotides a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more of the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more of the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more of the cyclication, and spared nerve injury (CMI) in an animal (e.g. spin) (e.g. spin) (e.g. spin) (e.g. spin) (e.g. spin) (e.g. spin) (e.g. spin) (e.g. spin) segmental nerve injury (CMI) in an animal (e.g. spin) (e.g. spin) segmental nerve injury (CMI) in an animal (e.g. spin) (e.g. spin) segmental nerve injury (SMI)) in an animal (e.g. spin) of the specification) which is differentially expressed during pain. Note: CT the sequence data for this patent did not form part of the printed composition, but was obtained in electronic form directly from WIPO at fip. whipo.int/pub/published\_potence.

The invention discloses a composition comprising two or more isolated rat or human polymucleotides or a polymucleotide which represents a fragment, or human polymucleotides or a polymucleotide and sequence. Also claimed are a vector comprising the novel polymucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a chart increases or decreases the expression of the polymucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polymucleotide sequence which is differentially a polymucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the composition, a method for identifying a compound useful in treating specification, a method for identifying a compound useful in treating composition comprising the one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating complypeptides or their antibodies. The polymucleotide or the compound that composition comprising the one or more compound that regulates its activity is useful for preparing a medicament for treating complypeptides or their antibodies. The polymucleotide or the compound that injury (CIUI) and spared nerve injury (SINI) in an animal (e.g. spinal segmental nerve injury (SINI) in an animal (e.g. spinal segmental nerve injury (SINI) in an animal (e.g. spinal personned nerve injury (SINI) in an animal (e.g. spinal personned nerve injury (SINI) in an animal (e.g. spinal personned nerve injury (SINI) in an animal (e.g. spinal personned nerve injury (SINI) in an animal (e.g. spinal personned nerve injury (SINI) in a part of the profile or this patent did not form part of the profile or this patent did not form to com 185 245 125 65 9 New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal. Antibodies directed against the interleukin-8 receptor B can be used to treat or prevent inflammation e.g. psoriasis, dermatitis, rheumatoid arthritis and particularly inflammatory bowel disease and chronic lung inflammation. When immobilised, these antibodies may be used to detect interleukin-8 receptor B expression in cells and tissues and for affinity additional chemokine superfamily receptor which was identified by probing lamda libraries of genomic DNA from a human monocyte-like cell line (L-60) and human peripheral blood lymphocytes using a large fragment of the interleukin-8 type A receptor DNA (see AAQ99006). (Updated on 25-MAR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Interleukin, IL-8; inflammation; psoriasis; dermatitis;
rheumatoid arthritis; inflammatory bowel disease;
chronic lung inflammation; treatment; antibody; affinity purification;

                                          2 PF4AR members were identified by probing lambda libraries from human monoclyte-like cell line HL-60 and human peripheral blood lymphocytes using a large fragment of IL-8 receptor DNA (full sequence given in AAQ80520). The nucleotide sequences of the 2 PF4ARs are given in AAQ80521 and AAQ80522, and their respective amino acid sequences in AAR68812 and AAR68813. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    123
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      185

CXCR4-potentiating agents and methods useful for inhibiting neovascularization, and treating solid cancers.

Disclosure; Page 47-48; 63pp; Japanese.

This sequence is the human CXCR4 protein. The invention relates to remedies inhibiting neovascularisation, remedies for solid cancer, remedies for diseases pathologically caused by neovascularisation and tissue repairing agents containing as the active ingredient a substance capable of potentiating CXCR4. Based on a finding that vascularisation is inhibited in a CXCR4 knockout mouse, it becomes possible to prepare remedies inhibiting vascularisation which contain as the active ingredient a substance capable of potentiating CXCR4, remedies for solid cancer, remedies for diseases pathologically caused by neovascularisation and tissue repairing agents containing as the active ingredient a substance capable of gotentiating CXCR4. It is also possible to establish methods for treatment with the use of these remedies

Use of CXCR-4 and SDF-1 as markers for diagnosis and treatment of e.g. tumors, degenerative disorders, growth deficiencies, hyper- and

This sequence represents CXC-chemokine receptor-4 (CXCR-4). Chemokine receptors play an important role in the chemotaxis of T-cells and receptors play an important role in the chemotaxis of T-cells and phagocytic cells to areas of inflammation. CXCR-4 is a member of the G-protein-coupled receptor family, which is involved in signal carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the carabidates of the ca

Treating or preventing reduced bone mass, e.g. osteoporosis, by reducing the level of neuropeptide Y activity in blood or cerebrospinal fluid.

Example 7; Page 85; 102pp; English.

The present invention relates to a method for treatment or prevention of bone diseases characterised by loss of bone mass, comprises administering to a mammal a compound that lowers the level of neuropeptide Y (NPY) in the serum or cerebrospinal fillid (CSF) or a compound that lowers the level of inositol phosphate (IP) or extracellular signal-regulated kinase (Herapy) or prevent osteoporais, osteopenia or Paget's disease, but may also be used e.g., in cases of fractures or bone metastases. These diseases may also be diagnosed by detecting elevated NPY levels, including monitoring of treatment, assessing efficacy of compounds in sequence is a human NPY %3 receptor

The specification describes an antibody which is specific for an antigenic fragment of gp120. This antigenic fragment binds to DC-SIGN or is exposed upon gp120 binding of DC-SIGN due to concomitant conformational change. DC-SIGN is a receptor that is specifically expressed on dendritic cells and facilitates infection of T lymphocytes with HIV. DC-SIGN is identical to a HIV-1 gp120-binding C-type lectin. DC-SIGN binds ICAM-3 (which is expressed constitutively on T lymphocytes) with high affinity. The antibody of the invention inhibits the trans enhancement of HIV entry into a T cell or macrophage facilitated by dendritic cells. The antibody is useful to treat or prevent HIV infection. The present sequence represents a human CXCR4 procein, which is a translocation promoting agent that interacts with CD4. This receptor functions in HIV-1 entry into cells KITVILILAFFACWLPYYIGISIDSFILLEIIKQGCEFENTVHKWISITEALAFFHCCLN 298 An antibody for the treatment or prevention of HIV-infection comprises a gpl20 portion which binds to DC-SIGN or is exposed upon gpl20 binding of DC-SIGN due to concomitant conformational change. Human CXCR4 protein. WO200172830-A2. Homo sapiens. 17-JAN-2002 04-OCT-2001 AAG80123; AAG80123 

This invention describes a novel diagnostic agent (A) comprising at least two different ligands (I) for receptors (II) that are implicated in disease. (A) are used for the diagnosis of tumors (especially colorectal or prostatic), organ rejection, inflammation and autoimmune diseases. Also inhibitors of (I) are used therapeutically against tumors (and their metastases), inflammation (particularly bronchial asthma or chronic bowel inflammation), or autoimmune diseases (rheumatoid arthritis or lupus), where the (cardio) vascular, lymphatic, respiratory, nervous, digestive, endocrine, motor or urogenital systems or skin are affected, and bone on the products of the invention are chemokine derivatives which have cytostatic, antiinflammatory, antiasthmatic, immunosuppressive, dermatological, antiinteumator, antiarthritic. Chemokines act on specific tumor and inflammatory calls through a constellation of these cells. Add80128 represent human chemokine fragments used to illustrate the method of the invention Sequence 352 AA

The invention relates to a method of identifying Cysteine-X-Cysteine chemokine receptor 4 (CXCR4) binding compounds. The method comprises testing and selecting compounds in a library for their ability to bind to cxCR4. Chemokines (chemoattractant cytokines) regulate the movement and biological activities of leukocytes in many disease situations. CXCR4 acts as a co-receptor for human immunodeficiency virus (HIV), as it interacts with the HIV envelope glycoproteins and the cellular CD4 ceceptor, to facilitate HIV entry into cells. The HIV glycoproteins (C anbsequently cleaved into gpl20 and gpq1. Gpl20 binds to CXCR4 and the coll subsequently cleaved into gpl20 and gpq1. Gpl20 binds to CXCR4 and the CC causing the virus to fuse with the cell membranes and thereby facilitating entry of the virus into the cell membranes and thereby councing the virus to fuse with the cell membranes and thereby councing the virus of the invention inhibit the entry of HIV into the CXCR4-binding compounds of the invention inhibit the entry of HIV into and the treatment and prevention of inhibit the entry of HIV intection and the treatment and prevention of acquired immunodeficiency syndrome (AIDS). The present sequence represents the human CXCR4 protein used in the method of the invention Identifying agents that bind to CXC chemokine receptor 4, useful for treatment and prevention of acquired immunodeficiency syndrome, comprises screening compound library for members that bind to the receptor. 241. .261 /note= "Transmembrane segment 6 (TM6)" 262. .282 /note= "Extracellular loop 3; this is involved in HIV 275 늉 /note= "Binds HIV gpl20" 280. .281 /note= "Apparently encoded by nucleotides 838-903 of AAX98241" 283. .307 /note= "Transmembrane segment 7 (TM7)" 308. .352 /note= "Intracellular C-terminus" SA Kates 'note= "Binds HIV gp120" Tan Hehir CA, Example 3; Fig 3B; 46pp; English. 21-WAR-2000; 2000US-0190946P. 21-MAR-2000; 2000US-0191996P. 21-MAR-2000; 2000US-0191299P. 20-MAR-2001; 2001US-00813448. 20-MAR-2001; 2001US-00813651. 21-MAR-2001; 2001WO-US009160. ```
Identifying a binding compound for cysteine-X-cysteine chemokine receptor 4 (CXCR4) for preventing or treating AIDS and HIV infection, comprises binding a molecule to a molecule with a binding property corresponding to CXCR4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes a method (M1) for identifying a binding compound for cysteine.X-cysteine chemokine receptor 4 (CXCR4) comprises binding a molecule from the library of two or more molecules to the molecule with a binding property corresponding to CXCR4. (M1) comprises:

(a) providing a library of two or more molecules; (b) providing a molecule with a binding property corresponding to CXCR4, (d) binding a molecule from the library of two or more molecules to the molecule with binding property or more molecules to the molecule with a binding to CXCR4; (d) separating the bound molecule from the library of two or more molecules; and (e) identifying the bound molecule as a binding compound for CXCR4. Also described is a binding compound (1) for CXCR4 identified from M1. (1) has virucide and

anti-HIV activities. A partially purified CXCR4 protein is useful for carrying out selection, identification and improvement of tight binding ligands in identifying therapeutically useful compounds. Therapeutic peptides, peptidomimetics, or small molecule antagonists or agonists of CXCR4 binding may be used in the prevention and treatment of AIDS and HIV infection. The present sequence represents human CXCR4 which is given in an example from the present invention
                                                                                                                                                                                                                                                                                                                                         125
                                                                                                                                                                                                                                                                                                                                                                               123

Human CXCR4 protein

us-09-36/-052-2.rag

Inducing chemotaxis of endothelial cells, useful for regulating angiogenesis, e.g. for treating cancer, comprises treatment with stromal cell-derived factor 1 alpha.

Claim 3; Fig 1; 26pp; English.

The invention describes a method of inducing chemotaxis of endothelial cells by treatment with stronal cell-derived factor lalpha (GDFIa). The method is used for stimulating EC chemotaxis, and thus angiogeneis, and studies a used for treating atherosclerosis, restenosis, ischaemic stroke and spinal cord injury. Inhibitucin of this process is useful in treatment and prevention of a very wide range of diseases, such as infection (by bacteria, fungi, protozoa or viruses such as human immunodeficiency virus (HIV) and adquired immunodeficiency syndrome (AIDS), pain, cancer and benign prostatic hypertrophy, diabetes, obesity, anorexia, bulimia, asthma, Parkinson's disease, acute heart failure, hypotension, hypotension, usinary retention, osteoprosis, anginal petrophy, migraine, vomiting, psychotic and neurological disorders (e.g. anxiety, cohizophrenia) and dsykinesias. (e.g. huntingdon's disease), inflammatory disease, rheumatorid arthritis, diabetic retinopathy, inflammatory disease, atherosclerosis, restenosis, Alzheimer's disease, congestive heart failure, cardiac remodeling, angiogenic disease, solid tumours, and Xaposi Sarcoma. This is the amino acid sequence of a CXC chemokine constructive.

ABG33065 standard; protein; 352 (first entry) 28-NOV-2002 ABG33065;

The present invention relates to a new method for inducing chemotaxis of endothelial cells (EC). The method of the invention involves treatment with a stromal cell-derived factor is (SPFIalpha). The method is used for stimulating EC chemotaxis, and thus angiogenesis, and is used for treating atherosclerosis, restenosis, ischaemic stroke and spinal cord injury, while inhibition of this process is useful in treatment and cord injury, while inhibition of this process is useful in treatment and cord injury, while inhibition of this process is useful in treatment and cord injury, while inhibition of this process is useful in treatment and cord injury, while and range of diseases, e.g. infection (by bacteria, fungity, process, obesity, anorexia, bulimia, asthma, allergies, Parkinson's disease, acute heart failure, hypotension, hypotension, construction, stroke, ulcers, migraine, vomiting, psychotic and neurological disorders and dyskinesias, inflammatory disease, atherosclerosis, restenosis, restenosis, retinopathy, inflammatory disease, atherosclerosis, restenosis, retinopathy, inflammatory disease, atherosclerosis, restenosis, retinopathy, inflammatory bowel disease, atherosclerosis, restenosis, angiogenic diseases, solid tumours, and Kaposi sarcoma. The present amino condition of the invention Chemotaxis; endothelial cell; EC; angiogenesis; atherosclerosis; restenosis; ischaemic stroke; spinal cord injury; infection; bacteria; fungl; protozoa; virus; pain; cancer; benign prostatic hypertrophy; diabetes; obesity; ancrexia; bullimia; asthma; allergy; hypertension; parkinson's disease; acute heart failure; hypotension; urinary retention; osteoporosis; angina pectoris; myocardial infarction; stroke; dyskinesia; migraine; vomiting; psychotic disorder; neurological disorder; ulcer; inflammatory disorder; rheumatoid arthritis; diabetic retinopathy; inflammatory bowel disease; atherosclerosis; restenosis; Kaposi sarcoma; Alzheimer; disease; congestive heart failure; cardiac remodelling; angiogenic disease; solid tumour; human; stromal cell derived factor-la; SDF-lalpha; CXCR4. 126 VLILAFISLDRYLAIVHATNSQRPRKLLAEKAVYVGVWIPALLLTIPDFIFADVSQGDIS 185 65 63 Inducing chemotaxis of endothelial cells, useful for regulating angiogenesis, e.g. for treating cancer, comprises treatment with stromal cell-derived factor 1 alpha. 6 VSIYTSDNYSEEVGSGDYDSNKEPCFRDENVHFNRIFLPTIYFIIFLTGIVGNGLVILVM 4 ISIYTSDNYTEEMGSGDYDSMKEPCFREENANFNKIFLPTIYSIIFLTGIVGNGLVILVW 66 GYOKKLRSMTDKYRLHLSVADLLFVITLPFWAVDAMADWYFGKFLCKAVHIIYTVNLYSS 64 GYQKKLRSMTDKYRLHLSVADLLFVITLPFWAVDAVANWYFGNFLCKAVHVIYTVNLYSS Gaps 5, 89.9%; Score 1678.5; DB 5; Length 352; 90.1%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 4, Application US/08801228

Patent No. 5922541

GENERAL INFORMATION:

APPLICANT: Meed, William I.

TITLE OF INVENTION: METHODS FOR DETECTION AND AMPLIFICATION OF

TITLE OF INVENTION: PF4A RECEPTOR NUCLEIC ACID

NUMBER OF SEQUENCES: 6

CORRESPONDENCE ADDRESS:

ADDRESSEE: Genentech, Inc.

STREET: 460 Point San Bruno Blvd

COUNTRY: Couth San Francisco

STATE: California

COUNTRY: USA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   306 PILYAFLGAKFKSSAQHALNSMSRGSSLKILSKGKRGGHSSVSTESESSSFHSS 359
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         PILYAFLGAKFKTSAQHALTSVSRGSSLKILSKGKRGCHSSVSTESESSSFHSS 352

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RESULT 8
$42.096
interleukin-8 receptor - rat
C;Species: Rattus norvegicus (Norway rat)
C;Species: Rattus norvegicus (Norway rat)
C;Species: O.5-Jan-1995 #sequence_revision 06-Jan-1995 #text_change 26-Aug-1999
C;Accession: 842.096
R;Gobl, A.E.; Wang, S.; Zhou, Y.; Oeberg, K.
submitted to the EMBL Data Library, Rebruary 1994
A;Description: Molecular cloning of the rat IL.8 receptor.
A;Recence number: 842.096
A;Status: preliminary
A;Molecule type: mRNA
A;Residus: 1-256 c4GDB
A;Cross-references: EMBL:X77797
C;Superfamily: vertebrate rhodopsin
C;Keywords: G protein-coupled receptor; transmembrane protein

Andecular cloning of rat CXCR4";
Submitted (MAR-1997) to the EMBL/GenBank/DDBJ databases.

L. FUNCTION: Receptor for the C-x-C chemckine SDF-1. Transduces a signal by increasing the intracellular calcium ions level:

Cardiac ventricular septum formation. Plays also an essential role in vascularization of the gastrointestinal tract, probably by requlating vascular branching and/or remodelling processes in endothelial cells. Involved in cerebellar neuronal layer formation, preventing premature migration of proliferating granule colls from the external granule layer inwards. In the CNS, could mediate hippocampal-neuron survival (By similarity).

C. SUBCELLULAR LOCATION: Integral membrane protein.

C. TINSUE SPECIFICITY: Expressed in neurons and in astrocytes.

C. PTMLARITY: Belongs to family 1 of G-protein coupled receptors.

bubitted (NOV-1997) to the SMB1/GenBank/DBD datebases.
-1- FUNCTION: Receptor for the C.X-C chemokine SDF-1. Transduces a signal by increasing the intracellular calcium ions level.
- SUBCELULAR LOCATION: Integral membrane protein.
-1- PTM: Sulfated (By aimilarity).
-1- PTM: Sulfated (By aimilarity).

Subitsumi M., Takahashi H.,
Submitted (JUL-1996) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Receptor for the C-X-C chemokine SDF-1. Transduces a signal by increasing the intracellular calcium ions level.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- PTM: Sulfaced (By similarity).
-!- PTM: Sulfaced (By similarity).

RECOMMENT OF THE RECORD OF THE CREST CORRECTION BOOTY MANGADERS

RET Naturally infected in west Africa: a comparison of coreceptor usage

RET Naturally infected in west Africa: a comparison of coreceptor usage

RET Naturally infected in west Africa: a comparison of coreceptor usage

RET NATURALITY STATE (1998).

C. I. FUNCTION: Receptor for the C.X-C chemokine SDF-1. Transduces a signal by increasing the intracellular calcium ions level.

C. I. SUBCELLULAR LOCATION: Integral membrane protein.

C. I. SUBCELLULAR LOCATION: Integral membrane protein.

C. I. SUBMILARITY: Belongs to family 1 of G-protein coupled receptors.

C. I. SUBMILARITY: Belongs to family 1 of G-protein coupled receptors.

C. I. SUBMILARITY: Integral membrane protein.

Virol. 144:273-285(1999).
-!- FUNCTION: Receptor for the C-X-C chemokine SDF-1. Transduces a signal by increasing the intracellular calcium ions level.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- PTH: Sulfaced (By similarity).
-!- PTH: Sulfaced (By similarity).

Thuman homologue, confers neither NPY binding sites nor NPY
responsiveness on transfected cells.";
I. Regul. Pept. 47.247-258(1993).
- !- FUNCTION: Receptor for the C.X-C chemokine SDF-1. Transduces a signal by increasing the intracellular calcium ions level.
- GUBCELLULAR LOCATION: Integral membrane protein.
- ISSUE SPECIFICITY: Brain, heart, kidney, lung and liver.
- ITISSUE SPECIFICITY: Brain, heart, kidney, lung and liver.
- ISIMILARITY: Belongs to family 1 of G-protein coupled receptors.
- I- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
- I- CAUTION: Was originally (Ref.1) thought to be a receptor for neuropeptide Y type 3 (NPY3-R).
                                                              MEDLINE=92100053; PubMed=1661837; RimLand J., Xin W., Sweetnam P., Saijoh K., Nestler E.J., Duman R.S.; Sequence and expression of a neuropeptide Y receptor cDNA."; "Nol. Pharmacol. 40.869-875(1991).

RM Thuran NK cells express CC chemokine receptors 4 and 8 and respond to remokine, and 1-309.";

Thymus and activation-receptor for the C-c type chemokines and activation-receptor for the C-c type chemokines and 1-309.";

L. Immunol. 164:4048-4054(2000)

TRAC/SCYA17 and MDC/SCYA22. The activate a phosphatidylinositol-calcium second messenger system. Can function as a chemoatrractant madiated by G(i) proteins which activate a phosphatidylinositol-calcium second messenger system. Can function as a chemoatrractant calcium second messenger system. Can function as a chemoatrractant calcium second messenger system. Can function as a chemoatrractant calcium second messenger system. Can function as a chemoatrractant calcium second messenger system. Can function as a chemoatrractant calcium second messenger system. Can function as a chemoatrractant calcium second messenger system. Calciumes in the CNS, could mediate hippocampal-neuron survival.

SUBCELLUIAR LOCATION: Integral membrane protein.

TISSUE SPECIFICITY: Predominantly accepted in the thymus, in peripheral blood Leukocytes, including T cells, mostly calciumed and in monocytes. Detected also in macrophages, IL-2-activated and in monocytes. Detected also in macrophages, IL-2-activated and in monocytes. Detected also in macrophages, IL-2-activated in brain microvascular and coronary artery endothelial cells.

PHOSPHORYLATION ON YET UNDEFINES ERLYTHR RESIDUES, MOST PROBABLY BY BETA-ADRENGERGIC RECEPTOR IN 10 f G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This SWISS-PROT entry is copyright. Incurron. Receptor to interleukin-8, which is a powerful neutrophils chemotactic factor. Binding of IL-8 to the receptor causes activation of neutrophils. This response is mediated via a G-protein that activate a phosphatidylinositol-calcium second messenger system. This receptor binds to IL-8 with a high affinity and to GRO/MGSA and NAP-2 also with a high affinity.

I. SUBCELUIAR LOCATION: Integral membrane protein.

SIMILARITY: Belongs to family 1 of G-protein coupled receptors. N-LINKED (GLCNAC. .) (POTENTIAL).

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
